

## Camp Ho Mita Koda & SugarPixel

Camp Ho Mita Koda, *the world's first* T1D Summer Camp, and Custom Type One (the maker of [SugarPixel](#)), *the world's first* dedicated blood glucose pixel clock of BG readings and alerts are teaming up!

That's right! Two of the industry leading T1D organizations in the world (and based in Ohio) have come together to support the CHMK community and beyond.

Beginning on April 1, 2024, every newly diagnosed camper, who registers for the new diagnosis discount and attends camp, within 12 months of being diagnosed, can request a **FREE SugarPixel** from Camp Ho Mita Koda!

SugarPixel is a secondary glucose display and alert system for following your continuous glucose monitor. It is the world's first dedicated CGM hardware monitor with random tone generation audio alerts, vibration alerts for the hearing impaired, customizable display options, and native multi-user following.

### Use SugarPixel for...

- Hard to wake teens and college students transitioning to independent care.
- Vibration alerts for hearing impaired and dual audio-vibration alerts for heavy sleepers.
- Displaying BG values from multiple T1D at the same time on a single device.
- A quick glance from across the room or across the yard with the large display.
